Department of Mathematics and Statistics
University of Reading

Plain language summary

Please insert your plain language summary (PLS) here. Your PLS should summarize your study including the motivation, methods, results, conclusions and their broader relevance without using jargon so that it is understandable by intelligent adults from outside of your discipline. The PLS should be a single paragraph of no more than 200 words long.

Declaration

I certify that this is my own work and that use of material from other sources has been properly and fully acknowledged in the text. I have read the University's definition of plagiarism and the department's advice on good academic practice. I understand that the consequence of committing plagiarism, if proven and in the absence of mitigating circumstances may include failure in the Year or Part or removal from the membership of the University. I also certify that neither this piece of work, nor any part of it, has been submitted in connection with another assessment.

In submitting this work I can confirm that I **[have/have not]** used Generative AI Tools to prepare and complete my assignment.

a. I acknowledge the use of **[insert AI system(s) and link]** to generate materials to support my research and understanding on the topic when drafting this assignment, but none of the outputs are included in the final version.

b. I acknowledge the use of **[insert AI system(s) and link]** to generate materials that were included within my final assessment in modified form. I have taken responsibility to ensure that where generated materials are included, these have been referenced appropriately, in accordance with the requirements of the assignment brief.

Contents

List of Tables	iii
List of Figures	iii
1 Development Of Computer Simulation Methods	1
2 Monte Carlo Methods	1
2.1 Pseudo-Random Number Generators	1
2.1.1 Or a subsubsection? (Please replace)	1
3 Bibliography	1
A Appendix A - Generative AI Tools	2
A.1 Listing from ChatGPT	2
A.1.1 ChatGPT output	2
A.1.2 How I modified this material	2

List of Tables

1	Caption	1
2	My caption here - example	3

List of Figures

1 Development Of Computer Simulation Methods

This is my first paragraph of text that is very clear and well written.

Definition. *My first definition*

And here my first equation

$$\Delta\Psi = 0 \tag{1}$$

If I want to refer to my first equation later, you can do so in this way: (1) and run $\LaTeX$ twice to get the equation number right.

2 Monte Carlo Methods

Theorem 2.1. *My first theorem*

2.1 Pseudo-Random Number Generators

My first table is given in Table 1.

Heading 1	Heading 2
1	2
3	4

Table 1: Caption

2.1.1 Or a subsubsection? (Please replace)

My first figure is given in Fig. 2.1.1.

3 Bibliography

Frenkel, D. & Smit, B. (1996), *Understanding Molecular Simulation: From Algorithms to Applications*, Academic Press.

Kopka, H. & Daly, P. W. (1999), *A Guide to LaTeX*, third edn, Pearson Education.

A Appendix A - Generative AI Tools

If you use Generative AI tools to help with your project you need to take three steps to properly acknowledge your use of these tools.

Step 1. Clearly state in their Declaration whether or not they used GAIT in their project. The Declaration should appear in the front-matter of your project, after the title page.

Step 2. In the main text you should cite your use of GAIT at appropriate points. You can reference this in the format of a personal communication or letter, including the accessed date

Step 3. Provide an AI Appendix explaining more detail

All students who have used AI should include the following in your AI Appendix:

- A description of the AI tool used (including a link),
- How the information was generated, including the prompts you used,
- The date accessed,
- Where the material is used in your project,
- How you evaluated the output from the AI tool (to check its correctness).

I suggest you include this information in the form of a table (see example in Table 2). Note that I have made this in landscape to give more space for text.

In addition, if you chose option b in your declaration (i.e. you generated materials that were included within your final assessment in modified form) you **MUST** include the original material generated by GAIT and briefly explain how you modified it. You can include this material in appendix subsections that you cross reference in your table (see example).

A.1 Listing from ChatGPT

A.1.1 ChatGPT output

"Here's the simplest, most common way to plot a line graph in Python using matplotlib...."

A.1.2 How I modified this material

I used my own data. I modified the axis labels and title to be specific to my data.

AI tool	Prompts used	Date accessed	Location of material in project	Evaluation of AI output	Listing of material
chatgpt.com	"Tell me how to plot a line graph in python"	12/12/2025	Approach used for plotting Figure 3	I coded it myself in python and checked the output by sketching some of the points on the plot by hand.	See A.1
